

Backflow Prevention:

All existing and new Backflow Prevention Assembly/CSI Test Reports must be submitted through the SCTS tool at www.sctrackingsolutions.com.

As part of the Caddo Basin SUD Cross Connection Control/Customer Service Inspection Program, Caddo Basin has partnered with SC Tracking Solutions, LLC (SCTS) to offer an online catalog and tracking tool for annual water service Backflow Prevention Assembly/CSI testing for commercial businesses, residential properties, and educational facilities. This web-based format aims to simplify the process and ensure that inspections are carried out in line with local ordinances and Texas Commission on Environmental Quality (TCEQ) regulations [30 TAC 290.44 (h) (4)].

Caddo Basin SUD appreciates your assistance in safeguarding the quality of our drinking water by having your Backflow Prevention Assembly inspected and tested annually. We believe that these changes will not only help bring our community into compliance with local, state, and federal laws, but also reduce paper waste by up to 90%. Additionally, it will provide customers with an easy way to review testing results and records of their own Backflow Prevention Assemblies.
