

WHAT YOU CAN DO

To conserve water AND help lower your water bill.

✓ **Fix leaks and install water-efficient fixtures.**

Even small drips add up—one leaky faucet can waste thousands of gallons a year. Check your sinks, toilets, and irrigation systems regularly. Installing low-flow showerheads, faucets, and toilets helps conserve water and reduce your utility bills at the same time.

✓ **Water lawns wisely — early mornings or evenings only.**

Watering during the heat of the day leads to quick evaporation and wasted water. Instead, water your lawn before 10 a.m. or after 6 p.m. when temperatures are cooler. Consider switching to drought-tolerant plants or native landscaping that requires less watering overall. And reach out to sprinklerusage@caddobasin.com for usage insight!

✓ **Support local water investments for a secure future.**

Your voice and participation matter. Encourage and support community projects that improve water infrastructure, upgrade treatment systems, or expand water storage capacity. Investing in water resilience today helps ensure reliable, clean water for generations to come.

✓ **Take advantage of all the resources available.**

Caddo Basin offers a plethora of tools and educational information to help you save water. Explore our website at caddbasin.com, or simply search on Google to provide water saving tips.
